

Profi-Kabeltrommel

The BACHMANN professional cable reels are distinguished by their particularly stable design. They are suitable for continuous use on construction sites and in harsh environments. In addition, our professional cable reels are approved in accordance with DGUV-I 203-006 for use on construction sites.

The professional cable reels are available in two different versions: depending on customer requirements, the reel body is made out of either hot-dip galvanised sheet steel or highly shatterproof special plastic. Both versions are exceptionally resistant to breakage. In addition, the sheet steel body is equipped with protective insulation, which increases protection against contact voltages.

A cushioning frame on the back side absorbs shocks of all types and ensures that both versions are highly robust. This makes the cable reel ideal for all demanding applications.

The dual tubular frame adds additional stability and support to the structure. The coated feet ensure that it stands level, and does not wobble. The floor-friendly foot rails also protect sensitive floors from signs of wear.

BENEFITS

- Shatterproof reel body
- Cable lengths up to 40 metres
- Shock-absorbing frame
- Conforms to DGUV-I-203-006
- Ergonomic handle
