zdock

Features

Zdock installation

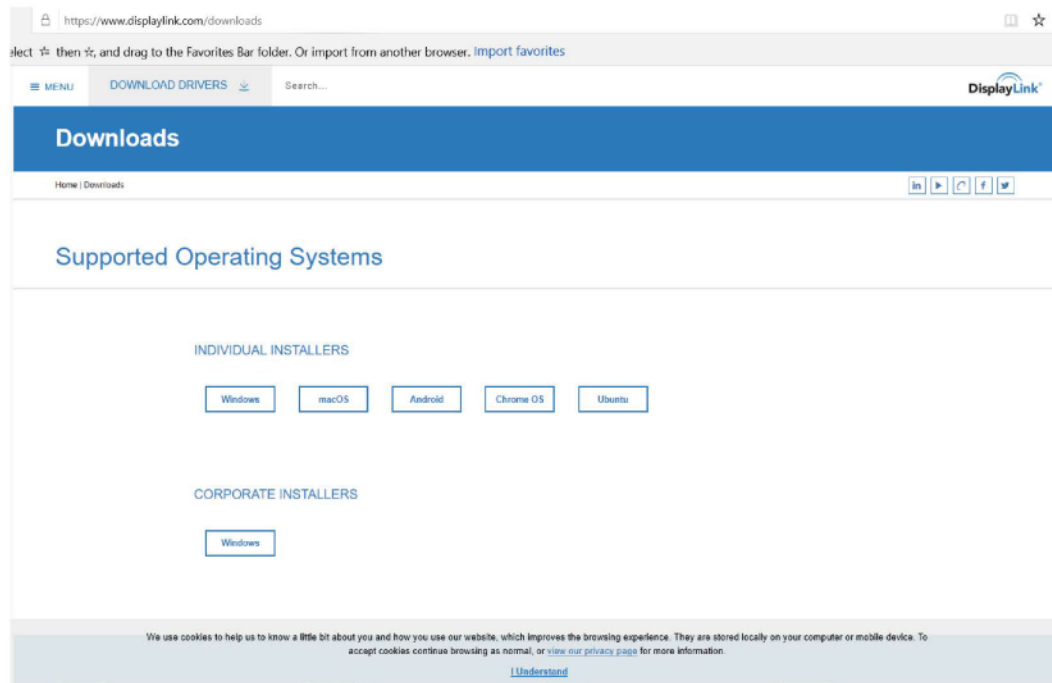

Important Information

1. Make sure that all your cable and port connections are fully tightened.
 2. Be sure to only use the power supply and upstream cable (from Zdock to laptop) supplied by zgonic with your Zdock.
 3. Make sure that all other cables (Video, Ethernet, etc.) and adaptors that you may require are of good quality and compliant for their intended applications.
 4. Download the DisplayLink Drivers using the Driver Installation instructions to follow.
-

Driver Installation

DisplayLink driver could be downloaded from this website

<https://www.displaylink.com/downloads>

Selecting Individual Windows Installer

Windows Driver Downloads

Here you can download drivers for DisplayLink® USB graphics chipsets incorporated in your dock, adapter or monitor. We recommend to update to the latest driver to address any potential security issue, fix bugs, improve performance and add new features.

Notes:

1. Your Original Equipment Manufacturer (OEM) may also provide software for your specific monitor, dock or adapter that differs from the DisplayLink releases. Please check their website for details.
2. Windows 10 S products using DisplayLink technology will get their device drivers either from OEM pre-installation or from Windows Update.

FAQs

Frequently ask question

There is no video on the monitors connected to Zdock DisplayPort.

Laptop failed to wake up from Ethernet port.

No audio on combo jack headphone connected to Zdock.

Difficulty finding cursor on connected 4k monitor screen.

Can Zdock work with USB-A port on notebook

Can a thunderbolt3 port on notebook be connected to ZDock to work

Suggested Solution

Check power adapter is switch on and the front led of Zdock is lighted. If not, press the Zdock power button to off and on again. The USB notification will sound and notebook screen will blank temporary when Zdock is connected properly.

Check the source input of monitor is set to Displayport and display cable from Zdock is connected to DP-in.

Check that your notebook USB-C ports support USB-3 data.

Laptop must be DC powered by barrel jack or USB-C.

Check the settings under BIOS Items to make sure laptop supports wake-up-from-Ethernet.

Enable Wake on magic packet on ZGO Dock network adapter in Device Manager in advance tab.

Tick allow this device to wake the computer.

Right click speaker icon on system tray on bottom right screen. Select Displaylink audio driver adapter for both output and input.

Right click mouse on open desktop and select personalisation. Select Themes and click Mouse cursor. In Mouse Properties Pointers tab, select Windows default (extra-large) (System scheme) from drop down list.

Yes, ZDock upstream cable comes with a USB-C to USB-A adapter so that it works with those laptops that does not have a USB-C port.

Depending on brand of notebook, Thunderbolt 3 port usually support power delivery charging and USB-3 data. It should work with ZDock. Notebook needs to be updated to the latest driver to prevent issues in setup.

FAQs

Frequently ask question

Suggested Solution

ZDock switches off by itself after 10 seconds.

Use only the power adapter that comes with ZDock, or else it will switch off by itself if a different adapter is used.

ZDock not detected with quick unplug and plug upstream cable.

Certain notebook takes a longer time to close its opened application when Zdock upstream cable is unplugged. Allow about 5 seconds interval before plugging in the upstream cable again.
